4. Chuquimarca Kevin

Team 1:
- In the use case diagram, define the use case of the customer.
- The class name should be more specific.
- To correct the relations between classes.
- The controls of the record movie aren't validated.
- Control the sequence of the screens.

Team 2:
- Use composition in the class diagram between appointment and medic.
- Control the date well.

Team 3:
- Specifically the name of the product in the use case diagram.
- Don´t use the word user for the name of a class.
- Don't use concepts of inthenerence and abstract class.
- The email is not validated.

Team 4:
- The functions of the system need to be enclosed in a rectangle in the use case diagram.
- The class diagram does not have empty classes.
- Locale the classes according to the MVC.
- Do not put the test package.
- The key is not encrypted.
- The tests must be in the unit test folder.
- The code is not consistent with the class diagram.
- Does not specify the combo you choose.
- The invoice data is not well validated.
